How to Build a Time Machine By Paul Davies

With his unique knack for making cutting-edge theoretical science effortlessly accessible, world-renowned physicist Paul Davies now tackles an issue that has boggled minds for centuries: Is time travel possible? The answer, insists Davies, is definitely yes—once you iron out a few kinks in the space-time continuum. With tongue placed firmly in cheek, Davies explains the theoretical physics that make visiting the future and revisiting the past possible, then proceeds to lay out a four-stage process for assembling a time machine and making it work. Wildly inventive and theoretically sound, **How to Build a Time Machine** is creative science at its best—illuminating, entertaining, and thought provoking.

Editorial Review

From Publishers Weekly

Is time travel possible? If so, what manner of machine would one need to traverse this fourth dimension? Covering ground similar to J. Richard Gott's *Time Travel in Einstein's Universe*, this slim, tongue-in-cheek treatise invokes the primary tenet of Einstein's special theory of relativity that both time and space are elastic to illustrate that time travel, while impractical, is definitely possible. The time travel mechanisms Davies (*The Fifth Miracle*) envisions are dramatically different from the devices that SF authors H.G. Wells and Ray Bradbury have employed in their fiction. All that's needed to travel to the future, noted theoretical physicist Davies asserts, is a little help from gravity and a spaceship that can reach speeds just under the speed of light. Traveling to the past is a trickier task, however, and Davies spends the bulk of his book explaining the components needed to construct a wormhole (a black hole "with an exit as well as an entrance"). Despite the author's penchant for diagrams and his habit of highlighting and repeating his major points, readers will struggle to accept some of his more difficult and extreme propositions such as the existence of an exotic matter possessing antigravitational properties, which is vital to his construction of a wormhole. While Davies's discussion of the paradoxes inherent in time travel and of the physical laws that seem to prevent it is both thought provoking and accessible, his limited focus on wormholes may disappoint those hungering for a broader discussion of time travel technology.

From Scientific American

Is time travel possible? Yes, says Davies, who recently retired (in his early 50s) as professor of mathematical physics at the University of Adelaide in Australia to concentrate on his writing. But "a moment's thought uncovers some tricky questions." Whereupon he discusses lucidly and engagingly both the concepts of physics that establish the possibility of time travel and the tricky questions. You could reach the future "by simply moving very fast." For visiting the past, the most popular proposal is a wormhole, "a sculpture in the structure of space that provides a shortcut between two widely separated spaces." There may be "cosmic taboos," though, that make time travel forever elusive.

A time-traveling machine *can* be constructed--provided one rotates a superdense cylinder of infinite length or locates a wormhole. Such are the contraptions contemporary physicists such as Frank Tipler and Kip Thorne (*Black Holes and Time Warps*, 1994) have conceived in their explorations of whether it's possible to build a time machine. Davies, also a physicist, has an impressive track record of writing popular titles about space-time (e.g., *About Time*, 1995), and he opens up the fascinating yet weird concept of time travel to readers new to the basic features of space-time. That does not mean his precis is simple, but it is lucid throughout, even sketching out the four technical parts required in a time machine that exploits quantum effects. And if a machine were actually built, many paradoxes would arise, which Davies explores in an inventive manner. An excellent explainer, Davies will well reward the curious bent on bending space-time.

From reader reviews:

Cara Fultz:

The book How to Build a Time Machine can give more knowledge and also the precise product information about everything you want. Exactly why must we leave the good thing like a book How to Build a Time Machine? A few of you have a different opinion about e-book. But one aim that book can give many facts for us. It is absolutely suitable. Right now, try to closer along with your book. Knowledge or info that you take for that, you may give for each other; you may share all of these. Book How to Build a Time Machine has simple shape however you know: it has great and massive function for you. You can search the enormous world by available and read a e-book. So it is very wonderful.

Carmelita Ratliff:

This How to Build a Time Machine is great publication for you because the content that is certainly full of information for you who also always deal with world and possess to make decision every minute. This kind of book reveal it facts accurately using great plan word or we can say no rambling sentences within it. So if you are read the idea hurriedly you can have whole info in it. Doesn't mean it only provides you with straight forward sentences but difficult core information with wonderful delivering sentences. Having How to Build a Time Machine in your hand like keeping the world in your arm, details in it is not ridiculous 1. We can say that no reserve that offer you world inside ten or fifteen moment right but this book already do that. So , this can be good reading book. Heya Mr. and Mrs. occupied do you still doubt in which?

Melissa Fanning:

Do you like reading a e-book? Confuse to looking for your preferred book? Or your book was rare? Why so many question for the book? But any kind of people feel that they enjoy to get reading. Some people likes examining, not only science book but novel and How to Build a Time Machine as well as others sources were given information for you. After you know how the truly amazing a book, you feel would like to read more and more. Science publication was created for teacher or students especially. Those books are helping them to include their knowledge. In some other case, beside science publication, any other book likes How to Build a Time Machine to make your spare time considerably more colorful. Many types of book like here.

Helen Chandler:

Reading a e-book make you to get more knowledge from the jawhorse. You can take knowledge and information coming from a book. Book is published or printed or outlined from each source that will filled update of news. In this modern era like right now, many ways to get information are available for anyone. From media social such as newspaper, magazines, science book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just seeking the How to Build a Time Machine when you required it?
