Amazon.com Review

In this 1995 Nebula Award-winning novel, a revolution is transforming the formerly passive Earth-colony of Mars. While opposing political factions on Mars battle for the support of colonists, scientists make a staggering scientific breakthrough that at once fuels the conflict and creates a united Mars front, as the technically superior Earth tries to take credit for it. Backed against a wall, colonial leaders are forced to make a monumental decision that changes the future of Mars forever.

From Publishers Weekly

Nebula Award winner Bear has long been known for novels of stunning scientific extrapolation and high literary quality from his early novel *Blood Music* to his more recent *Queen of Angels*. This new novel of Mars is his finest yet. Bear follows the unlikely career of Casseia Majumdar of the Majumdar Binding Multiple (a sort of cross between an extended family and a corporation) as she goes from lukewarm student activist to president of the fledgling Federal Republic of Mars. Beginning as a coming-of-age story, with Casseia encountering corruption as well as courage and determination in a student uprising, the narrative then becomes a fine, taut and realistic political novel, as Casseia travels to Earth as part of an ambassadorial retinue, and later serves as second in leader Ti Sandra's push for Martian unification. As conflict heats up between upstart Mars and Mother Earth, Bear introduces a wildly intriguing hard-science idea, and the novel spins into a tense science fiction thriller. Bear offers a fast-moving plot; realistic, appealing characters; a vividly imagined future Earth awash in "tailored microbes," nanotechnology and dirty dealing; and the most believable evocation of the workings of politics and science in any recent science fiction novel. It all adds up to a blowout of a book, perhaps the best of the recent Mars novels, and certainly one of the best sf novels of the year.

From Library Journal

Revolution is not a new concept as colonies grow more independent from their mother countries. Bear, author of *The Wind from a Burning Woman* (Audio Reviews, LJ 12/92), uses this scenario as the backdrop for *Moving Mars* with great success. Combining hard science with colonial naivete, he weaves an epic story of Mars, the colony, against the technologically superior but culturally remote mother Earth. When a staggering scientific breakthrough occurs on Mars, the "Terries" scurry to regain control of their Martian "Rabbit." The chaotic political conditions of the Martian republic do not enhance the colonists position, and their leaders find themselves up against more than they bargained for. Frantically trying to gain a base of support from their constituents, they are backed against the wall by the theft of their technology by Earth. Forced to make a monumental decision that changes the future of Mars forever, the colonial leaders embark upon the ride of their lives. This production is well narrated and effective. Recommended for public libraries.
