The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) From Springer

Molecular chaperones are a fundamental group of proteins that have been identified only relatively recently. They are key components of a protein quality machinery in the cell which insures that the folding process of any newly-synthesized polypeptide chain results in the formation of a properly folded protein and that the folded protein is maintained in an active conformation throughout its functional lifetime. Molecular chaperones have been shown to play essential roles in cell viability under both normal and stress conditions. Chaperones can also assist in the unfolding and degradation of misfolded proteins and in disaggregating preformed protein aggregates. Chaperones are also involved in other cellular functions including protein translocation across membranes, vesicle fusion events, and protein secretion.

In recent years, tremendous advances have been made in our understanding of the biology, biochemistry, and biophysics of function of molecular chaperones. In addition, recent technical developments in the fields of proteomics and genomics allowed us to obtain a global view of chaperone interaction networks. Finally, there is now a growing interest in the role of molecular chaperones in diseases.

This book will provide a comprehensive analysis of the structure and function of the diverse systems of molecular chaperones and their role in cell stress responses and in diseases from a global network perspective. ?

Users Review

From reader reviews:

Thomas Berg:

This The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) are reliable for you who want to certainly be a successful person, why. The key reason why of this The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) can be on the list of great books you must have is giving you more than just simple reading through food but feed you with information that possibly will shock your before knowledge. This book will be handy, you can bring it everywhere you go and whenever your conditions at e-book and printed people. Beside that this The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) forcing you to have an enormous of experience for example rich vocabulary, giving you trial of critical thinking that we understand it useful in your day exercise. So , let's have it and luxuriate in reading.

Mary Molinari:

Often the book The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) has a lot of information on it. So when you check out this book you can get a lot of help. The book was published by the very famous author. The writer makes some research ahead

of write this book. This particular book very easy to read you may get the point easily after looking over this book.

Norman Duque:

You are able to spend your free time to read this book this book. This The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) is simple bringing you can read it in the park, in the beach, train and soon. If you did not have got much space to bring often the printed book, you can buy often the e-book. It is make you easier to read it. You can save typically the book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.

Mary Adams:

Book is one of source of information. We can add our know-how from it. Not only for students but in addition native or citizen will need book to know the revise information of year to be able to year. As we know those ebooks have many advantages. Beside many of us add our knowledge, also can bring us to around the world. Through the book The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) we can take more advantage. Don't someone to be creative people? To get creative person must choose to read a book. Merely choose the best book that appropriate with your aim. Don't always be doubt to change your life with this book The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology). You can more attractive than now.
