Multilevel Analysis: Techniques and Applications (Quantitative Methodology Series) By Joop J. Hox, Mirjam Moerbeek, Rens van de Schoot

This book is an introduction to multilevel analysis for applied researchers featuring models for hierarchical or nested data. This book presents two types of models: The multilevel regression and multilevel covariance structures models.

Despite the book being an introduction, it includes a discussion of many extensions and special applications. As an introduction, it will be useable in courses in a variety of fields, such as psychology, education, sociology, and business. The various extensions and special applications make it useful to researchers who work in applied or theoretical research, and to methodologists that have to consult with these researchers. The basic models and examples are discussed in non-technical terms; the emphasis is on understanding the methodological and statistical issues involved in using these models. Some of the extensions and special applications contain more technical discussions, either because that is necessary for understanding what the model does, or as an introduction to more advanced treatments. Thus, the book will be useful as an introduction and as a standard reference for a large variety of applications.

Editorial Review

Users Review

From reader reviews:

Matthew Siller:

The guide with title Multilevel Analysis: Techniques and Applications (Quantitative Methodology Series) has lot of information that you can find out it. You can get a lot of profit after read this book. This specific book exist new expertise the information that exist in this e-book represented the condition of the world at this point. That is important to yo7u to find out how the improvement of the world. This particular book will bring you in new era of the syndication. You can read the e-book on your own smart phone, so you can read it anywhere you want.

Douglas Stevens:

Typically the book Multilevel Analysis: Techniques and Applications (Quantitative Methodology Series) has a lot of knowledge on it. So when you check out this book you can get a lot of benefit. The book was written by the very famous author. Mcdougal makes some research previous to write this book. This book very easy to read you can obtain the point easily after perusing this book.

Zachary Connors:

Reading a book for being new life style in this year; every people loves to study a book. When you examine a book you can get a lot of benefit. When you read ebooks, you can improve your knowledge, due to the fact book has a lot of information onto it. The information that you will get depend on what forms of book that you have read. In order to get information about your research, you can read education books, but if you want to entertain yourself read a fiction books, this sort of us novel, comics, and also soon. The Multilevel Analysis: Techniques and Applications (Quantitative Methodology Series) will give you a new experience in reading a book.

Jane Rippeon:

Many people spending their time by playing outside together with friends, fun activity together with family or just watching TV 24 hours a day. You can have new activity to invest your whole day by looking at a book. Ugh, do you think reading a book really can hard because you have to bring the book everywhere? It alright you can have the e-book, taking everywhere you want in your Smartphone. Like Multilevel Analysis: Techniques and Applications (Quantitative Methodology Series) which is obtaining the e-book version. So , why not try out this book? Let's observe.
