Space Electronic Reconnaissance: Localization Theories and Methods By
Fucheng Guo, Yun Fan, Yiyu Zhou, Caigen Zhou, Qiang Li

Presents the theories and applications of determining the position of an object in space through the use of satellites

As the importance of space reconnaissance technology intensifies, more and more countries are investing money in building their own space reconnaissance satellites. Due to the secrecy and sensitivity of the operations, it is hard to find published papers and journals on the topic outside of military and governmental agencies. This book aims to fill the gap by presenting the various applications and basic principles of a very modern technology. The space electronic reconnaissance system in mono/multi-satellite platforms is a critical feature which can be used for detection, localization, tracking or identification of the various kinds of signal sources from radar, communication or navigation systems.

Localization technology in space electronic reconnaissance uses single or multiple satellite receivers which receive signals from radar, communication and navigation emitters in the ground, ocean and space to specify the location of emitter. The methods, principles and technologies of different space electronic reconnaissance localization systems are introduced in this book, as are their performances, and the various methods are explained and analysed. Digital simulations illustrate the results.

- Presents the theories and applications of determining the position of an object in space through the use of satellites
- Introduces methods, principles and technologies of localization and tracking in the space electronic reconnaissance system, the localization algorithm and error in satellite system and near space platform system, and the tracking algorithm and error in single satellite-to-satellite tracking system
- Provides the fundamentals, the mathematics, the limitations, the measurements, and systems, of localization with emphasis on defence industry applications

Highly relevant for Engineers working in avionics, radar, communication, navigation and electronic warfare.

Chapters include:- the introduction of space electronic reconnaissance localization technology, knowledge about the satellite orbit and basic terminology of passive localization, single satellite geolocation technology based on direction finding, three-satellite geolocation technology based on time difference of arrival (TDOA), two-satellite geolocation technology based on TDOA and frequency difference of arrival (FDOA), the single satellite localization technology based on kinematics theory, localization principles of near-space platform electronic reconnaissance systems, the orbit determination of single satellite-to-satellite tracking using bearings only(BO) information, the orbit determination of single satellite-to-satellite tracking using bearings and frequency information, the orbit determination of single satellite-to-satellite tracking using frequency only(FO) information. Each chapter ends with a problem and solution section, some using Matlab code.

Editorial Review

From the Back Cover

Determining the positions of various radar, communication, or navigation sources by intercepting radio signals transmitted from these sources is very useful in electronic intelligence collection and early warning. Due to the regular orbit of a satellite and the prior knowledge of emitters on the Earth's surface, the localization problem in space electronic reconnaissance is intrinsically different from geolocation problems using platforms on land, ocean or air. This book presents some basic theories and methods of how to geolocate the emitter on earth or in aerospace by using one or multiple satellites.

- Presents the theories and methods of determining a source's position in space through the use of satellites.
- Introduces the methods, principles and technologies of
 - localization and tracking sources with space electronic reconnaissance systems
 - localization algorithms and error in satellite system and near-space platform systems
 - tracking algorithms and error in single satellite-to-satellite tracking systems.
- Provides the fundamentals, mathematics, analysis, measurements, and systems of localization with emphasis on defense industry applications.

This book is written for engineers and researchers working in avionics, radar, communication, navigation and electronic warfare. The book can also be used by postgraduates studying aerospace engineering, electronic engineering, communication engineering, and electronic countermeasures.

Users Review

From reader reviews:

Arlen Bullock:

What do you ponder on book? It is just for students since they are still students or that for all people in the world, exactly what the best subject for that? Simply you can be answered for that question above. Every

person has distinct personality and hobby for each and every other. Don't to be compelled someone or something that they don't need do that. You must know how great as well as important the book Space Electronic Reconnaissance: Localization Theories and Methods. All type of book could you see on many solutions. You can look for the internet methods or other social media.

Emily Carey:

What do you about book? It is not important to you? Or just adding material when you really need something to explain what you problem? How about your extra time? Or are you busy individual? If you don't have spare time to try and do others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? Every individual has many questions above. They must answer that question since just their can do that will. It said that about book. Book is familiar in each person. Yes, it is proper. Because start from on guardería until university need this specific Space Electronic Reconnaissance: Localization Theories and Methods to read.

Luther Ritenour:

This Space Electronic Reconnaissance: Localization Theories and Methods is completely new way for you who has interest to look for some information given it relief your hunger details. Getting deeper you in it getting knowledge more you know or you who still having little bit of digest in reading this Space Electronic Reconnaissance: Localization Theories and Methods can be the light food for you because the information inside this book is easy to get by simply anyone. These books create itself in the form which is reachable by anyone, that's why I mean in the e-book form. People who think that in e-book form make them feel tired even dizzy this reserve is the answer. So you cannot find any in reading a publication especially this one. You can find actually looking for. It should be here for an individual. So , don't miss this! Just read this e-book type for your better life in addition to knowledge.

Marshall Jackson:

You may get this Space Electronic Reconnaissance: Localization Theories and Methods by look at the bookstore or Mall. Only viewing or reviewing it might to be your solve trouble if you get difficulties for the knowledge. Kinds of this publication are various. Not only simply by written or printed but also can you enjoy this book by simply e-book. In the modern era just like now, you just looking by your local mobile phone and searching what your problem. Right now, choose your personal ways to get more information about your publication. It is most important to arrange you to ultimately make your knowledge are still upgrade. Let's try to choose suitable ways for you.
