Geometrical Methods of Mathematical Physics By Bernard F. Schutz

In recent years the methods of modern differential geometry have become of considerable importance in theoretical physics and have found application in relativity and cosmology, high-energy physics and field theory, thermodynamics, fluid dynamics and mechanics. This textbook provides an introduction to these methods - in particular Lie derivatives, Lie groups and differential forms - and covers their extensive applications to theoretical physics. The reader is assumed to have some familiarity with advanced calculus, linear algebra and a little elementary operator theory. The advanced physics undergraduate should therefore find the presentation quite accessible. This account will prove valuable for those with backgrounds in physics and applied mathematics who desire an introduction to the subject. Having studied the book, the reader will be able to comprehend research papers that use this mathematics and follow more advanced pure-mathematical expositions.

Editorial Review

Review

"...excellent. It would require a great deal of delving in the literature to produce equivalent treatments....a very useful introduction...." J. M. Stewart, *Journal of Fluid Mechanics*

"...Schutz has such a mastery of the material that it soon becomes clear that one is in authoritative hands....this book is the most lucid I have come across at this level of exposition. It is eminently suitable for a graduate course (indeed, the more academically able undergraduates should be able to cope with most of it), and the applications should suffice to persuade any physicist or applied mathematician of its importance." Ray d'Inverno, *Times Higher Education Supplement*

About the Author

Bernard Schutz has done research and teaching in general relativity and especially its applications in astronomy since 1970. He is the author of more than 200 publications, including *A First Course in General Relativity and Gravity from the Ground Up* (both published by Cambridge University Press). Schutz currently specialises in gravitational wave research, studying the theory of potential sources and designing new methods for analysing the data from current and planned detectors. He is a member of most of the current large-scale gravitational wave projects: GEO600 (of which he is a PI), the LIGO Scientific Collaboration, and LISA. Schutz is a Director of the Max Planck Institute for Gravitational Physics, also known as the Albert Einstein Institute (AEI), in Potsdam, Germany. He holds a part-time chair in Physics and Astronomy at Cardiff University, Wales, as well as honorary professorships at Potsdam and Hanover universities in Germany. Educated in the USA, he taught physics and astronomy for twenty years at Cardiff before moving to Germany in 1995 to the newly-founded AEI. In 1998 he founded the open-access online journal *Living Reviews in Relativity*. The *Living Reviews* family now includes six journals. In 2006 he was awarded the Amaldi Gold Medal of the Italian Society for Gravitation (SIGRAV), and in 2011 he received an honorary DSc from the University of Glasgow. He is a Fellow of the American Physical Society and the Institute of Physics, an Honorary Fellow of the Royal Astronomical Society, and a member of the Learned Society of Wales, the German Academy of Natural Sciences Leopoldina and the Royal Society of Arts and Sciences, Uppsala.

Users Review

From reader reviews:

Lisa Gaither:

Have you spare time for just a day? What do you do when you have much more or little spare time? Yep, you can choose the suitable activity intended for spend your time. Any person spent their own spare time to take a move, shopping, or went to often the Mall. How about open or maybe read a book titled *Geometrical Methods of Mathematical Physics*? Maybe it is to be best activity for you. You realize beside you can spend your time with your favorite's book, you can smarter than before. Do you agree with the opinion or you have various other opinion?

Geraldine Carlson:

This book untitled Geometrical Methods of Mathematical Physics to be one of several books that best seller in this year, this is because when you read this publication you can get a lot of benefit on it. You will easily to buy this specific book in the book retail outlet or you can order it by means of online. The publisher of this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Mobile phone. So there is no reason for your requirements to past this publication from your list.

Norma Eberhart:

Do you have something that you want such as book? The guide lovers usually prefer to decide on book like comic, small story and the biggest the first is novel. Now, why not striving Geometrical Methods of Mathematical Physics that give your fun preference will be satisfied by simply reading this book. Reading practice all over the world can be said as the means for people to know world a great deal better then how they react toward the world. It can't be stated constantly that reading routine only for the geeky man or woman but for all of you who wants to become success person. So , for all you who want to start reading through as your good habit, you could pick Geometrical Methods of Mathematical Physics become your personal starter.

Charlsie Sprouse:

You may spend your free time to see this book this guide. This Geometrical Methods of Mathematical Physics is simple to create you can read it in the area, in the beach, train as well as soon. If you did not include much space to bring the actual printed book, you can buy often the e-book. It is make you easier to read it. You can save typically the book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.
